PROFESSIONAL SUMMARY

Motivated and detail-oriented **SOC Analyst** with knowledge of network security and cyber threats. Skilled in monitoring security alerts, analyzing logs, and responding to incidents. Able to use security tools like SIEM to detect and prevent attacks. Good at identifying suspicious activities and reporting security issues quickly. Strong problem-solving skills and able to work well in a team. Committed to keeping systems and data safe from cyber threats.

EDUCATION

Sri Sairam Institute of Technology

Bachelor of Engineering – CSE (Cybersecurity) | CGPA: 7.79/10

India

2026 – Present

SKILLS SUMMARY

Languages: Python (Basic), C, SQL

Security Tools: Splunk, Wireshark, Nmap, Burp Suite, Kali Linux

Networking: TCP/IP, OSI Model, Firewalls, IDS/IPS

Platforms: Linux (Ubuntu, Kali), Windows

TECHNICAL EXPERIENCE

Security Operations Center (SOC) – Lab Practice

Cybersecurity Student

2024 – Present

- Performed SOC activities including log monitoring, alert analysis, and basic incident investigation using **Splunk**.
- Analyzed Windows, Linux, and network logs to detect brute-force attacks, suspicious IP activity, and unauthorized access attempts.
- Created and configured **Splunk dashboards** and real-time alerts for proactive threat detection.
- Conducted packet analysis using **Wireshark** to identify abnormal traffic patterns and potential network threats.
- Executed vulnerability scanning and basic penetration testing using **Nmap** and **Burp Suite** in controlled lab environments.
- Developed and maintained a structured **Risk Register** to identify, assess, and track cybersecurity risks.
- Applied likelihood–impact matrix methodology to evaluate risk severity and recommend mitigation strategies.
- Mapped risks to **ISO 27001** security controls and documented mitigation plans following governance best practices.
- Utilized Linux (Ubuntu/Kali) for system navigation, permission management, process monitoring, and security configuration.
- Applied networking fundamentals including TCP/IP, OSI model, firewalls, and IDS/IPS concepts during security analysis.

PROJECTS

Risk Register Development & Risk Assessment | *Risk Management, ISO 27001, Excel*

- Developed a structured Risk Register to identify, assess, and track organizational security risks.
- Classified risks based on likelihood, impact, and overall risk rating using qualitative risk assessment methodology.
- Identified threats such as data breaches, insider threats, phishing attacks, and system vulnerabilities.
- Defined mitigation strategies including risk avoidance, reduction, transfer, and acceptance.
- Mapped risks to **ISO 27001** security controls for compliance alignment.
- Documented risk owners, review dates, and treatment plans following standard risk management practices.

Part Rate Finder & Billing System | *Java, Swing, SQLite, JDBC*

- Developed a desktop-based GUI application to automate part number rate lookup.
- Implemented real-time rate fetching using **HashMap** data structure.
- Integrated SQLite database using JDBC for persistent search history storage.
- Used **PreparedStatement** to ensure secure database operations and prevent SQL injection.
- Designed automatic table creation and structured data logging for search tracking.
- Improved efficiency by reducing manual rate lookup errors.

CERTIFICATIONS

- **Ethical Hacking** – Boston Institute of Analytics
- **Cybersecurity** – Boston Institute of Analytics
- **Data Analytics with Python** – NPTEL
- **EX200** – Red Hat Certified System Administrator (RHCSA)
